

A.DNA is a permission based software solution providing companies a unique service to store, organize, verify and share key company data (the company 'DNA').

WHAT IS A.DNA?

A.DNA allows companies to create, organize, store and share unique and verified data records (or 'data events') throughout their business lifecycle.

WHY IS IT UNIQUE?

The A.DNA service leverages core blockchain concepts and technologies, enabling all data records which a company creates to have the following features:

IMMUTABLE

All data records are irreversible and unchangeable.

UNANIMOUS

All parties involved in the data record agree to the validity of the data record.

TIME-STAMPED

All data records and approval trails are permanently stamped for time, date, place, etc.

ENCRYPTED

All information and records can be stored with encryption and made shareable only with parties granted access for a specific purpose and time.

USER BENEFITS:

COMPANIES (DATA OWNERS) USING OUR SOFTWARE SOLUTION GET:

- Organized, permanent and verifiable data related to key corporate events and information.
- Ability to provide immediate, efficient and secure access to information for trusted intermediaries and 3rd parties.
- Significant time and cost savings.
- Faster decision process.

TRUSTED INTERMEDIARIES (FIDUCIARIES, AUDIT, LEGAL/TAX, CONSULTANTS) GET:

- Easy, secure and immediate access to client provided information.
- Cost savings and efficiencies in time and manpower needed to collect and analyze company information.
- Increased visibility / new clients via accreditation as A.DNA Key Partners.

3RD PARTIES REQUIRING COMPANY DATA (BANKS, LAWYERS AND INVESTORS):

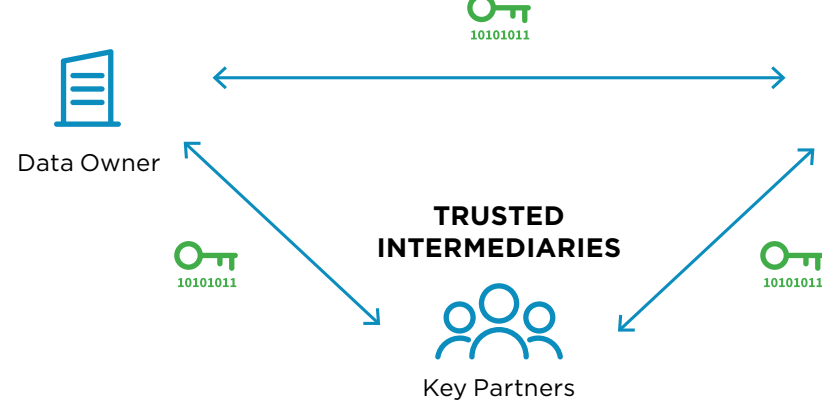

- Direct access to authorized company data and information via a secure, easy to use platform.
- Independently verified / audited company data.
- Verified transaction data on shareholdings.
- Independent ratings from customers, suppliers, employees, etc.)

HOW DOES IT WORK?

The A.DNA service allows companies to share data directly with 3rd parties such as banks, lawyers, buyers, investors as well as to verify selected data via A.DNA Key Partners before that data is shared (eg audited financials).

The company owns, stores and controls its own data, with the A.DNA software and backend systems enabling the sharing of selected files via encrypted and password protected access.
